Dear Colleague:

A young child's earliest years carry endless promise. As researchers tell us, it is a time when a child's mind literally shapes itself from the stimulation of each new experience. From birth to age five, we have a one-of-a-kind window to nurture each child's ability to learn – so that he or she can enter school fully ready to succeed.

That is why I am pleased to share with you *Children Entering School Ready to Learn: The 2011-2012 Maryland School Readiness Report*. The report shares what we have learned from the 2011-2012 Maryland Model for School Readiness (MMSR) data about the school readiness of Maryland's children: statewide, by subgroups, and for each of Maryland's 24 local jurisdictions. Some of the highlights are:

- The percentage of Maryland kindergarteners fully ready to start school increased to 83% in 2011-2012, up 2 points from 2010-2011. This exceeds expectations for this year's gain, and it continues the remarkable 34-point increase of the past 10 years, which began with school readiness at 49% in 2001-2002.
- Maryland experienced pronounced gains in school readiness across all domains of learning. In the core cognitive domains, the State saw a 37-point increase from 2001-2002 in Language and Literacy (73% fully ready for 2011-2012), a 37-point improvement in Mathematical Thinking (77% fully ready), and a 47-point jump in Scientific Thinking (71% fully ready).
- African-American kindergarteners made big strides: 79% of African-American children are fully school-ready in 2011-2012, up from 37% in 2001-2002 and 76% in 2010-2011.
- The percentage of kindergarteners from low-income households (as indicated by Free and Reduced Price Meal status) who are fully school-ready rose from 34% in 2001-2002 and 73% in 2010-2011 to 76% in 2011-2012.
- Significantly more English Language Learners (ELL) are fully school-ready, up from 35% in 2001-2002 and 68% in 2010-2011 to 72% in 2011-2012.
- Children with disabilities made substantial progress: 59% are fully ready, gaining 29 points from 2001-2002 and 3 points more than last year.
- Kindergarteners attending public PreK the year prior to entering school continue to be well-prepared: 83% fully school-ready in 2011-2012, up from 47% in 2001-2002 and 81% in 2010-2011.

I am both heartened by our progress and motivated to continue our steady improvement. On behalf of all who work so hard to see that our children have every possible opportunity to learn, I urge you to use this indispensable report to vigorously promote school readiness for all of Maryland's young children.

When our children succeed, so does Maryland.

Sincerely,

Bernard J. Sadusky  
Interim State Superintendent of Schools

## School Readiness Results for School Year 2011-12

### More Students are Entering Maryland Classrooms Prepared to Learn

The Maryland Model for School Readiness (MMSR) Kindergarten Assessment results indicate that Maryland students entering kindergarten this school year were better prepared than those in the past. The cohort of Maryland's students entering kindergarten in school year 2011-12 improved its overall school readiness skills by two percent (2%) compared to students who entered kindergarten in the 2010-11 school year. The percentage of incoming kindergartners who were rated by their teachers as "fully ready," using a customized Work Sampling System® (WSS) assessment, went from eighty-one percent (81%) last year to eighty-three percent (83%) this year. The increase from the baseline year of 2001-02 is thirty-four percent (34%).

Percentages in graph may not equal 100% due to rounding

The upward trend is a significant shift from school year 2001-02 and reflects the statewide efforts of improving the early learning opportunities for young children as they begin their school career. The results for the *Language and Literacy* and *Mathematical Thinking* domains are even more pronounced. According to the teachers' assessment, thirty-seven percent (37%) more children were rated "fully ready" in both domains compared to youngsters who entered kindergarten in 2001-02.

### Improvement in School Readiness is Apparent in All Demographic Categories

The upward trend from school year 2001-02 is evident for all subgroups. The improvement among low-income children and children with disabilities was significant with forty-two percent (42%) and twenty-nine percent (29%) respectively for the Composite for each group. The increase for English Language Learners (coded as ELL in Appendices B and D) from 2001-02 is thirty-seven percent (37%) for the composite and thirty-three percent (33%) in the domain of *Language and Literacy*.

## Maryland Composite: All Domains Percentage of Students Fully Ready

### Relationship of School Readiness and Prior Early Care Experiences

Each year, local school systems collect information of where children received their early care and education one year prior to kindergarten. The Prior Care categories reflect children who were exclusively enrolled in one of the following early childhood programs: childcare centers, Head Start, non-public nursery, family child care, or public school prekindergarten. In addition, the report includes information about children who were not enrolled in state regulated programs but either stayed home or had informal care by a relative or other care giver. Each category represents different demographic groups of children. For instance, public school prekindergarten and Head Start programs are free and almost exclusively serve low-income children, while the parents of children enrolled in child care and non-public nurseries pay substantial tuition for early care and education.

Children who have been enrolled in most of the early care and education programs have continued to improve from school year 2001-02. The composite scores for prekindergarten and Head Start children have improved by thirty-six (36%) and thirty-three percent (33%) respectively. The composite scores for children who attended child care centers and family child care improved by forty-two percent (42%) and thirty-four percent (34%) respectively from 2001-02.

### Availability of the 2011-12 School Readiness Report

On March 27, 2012, the school readiness information for school year 2011-12 will be available online at [www.marylandpublicschools.org](http://www.marylandpublicschools.org) or at the dedicated website for the Maryland Model for School Readiness (MMSR) at [www.mdk12.org/instruction/ensure/mmsr](http://www.mdk12.org/instruction/ensure/mmsr). Hard copies of the report are available upon request from the Maryland State Department of Education, Division of Early Childhood Development, Early Learning Office, at 410-767-0335.

## ***Maryland's School Readiness Initiative***

### **Race to the Top Early Learning Challenge funds for four years**

The latest validation of Maryland's national leadership in early education is the award of the Race to the Top – Early Learning Challenge (RTT-ELC) grant which nine states received as part of the federal Race to the Top reform program. In combination with the current Race to the Top grant for K-12 education, Maryland is tackling comprehensive and seamless birth-through-grade-twelve improvements such as:

- Aligning early learning standards with statewide Common Core Standards
- Carrying out professional development to put these standards into practice in all early learning and development programs.
- Refining Maryland's comprehensive assessment system in early childhood.

### **The Importance of School Readiness**

Neuro-scientific research strongly supports the belief that young children's learning before they enter formal education is an essential foundation for later school success. Increasingly, state policy makers across the country are addressing readiness for school by improving the learning opportunities for young children before they enter school, particularly those who are enrolled in early care and education programs. In addition, many children require necessary family and health support to thrive developmentally.

### **Charge by the Maryland General Assembly and the Maryland State Board of Education**

On January 20, 2000, the Subcabinet for Children, Youth, and Families submitted a report to the Joint Committee on Children, Youth, and Families outlining strategies to improve services for young children and to prepare them to enter school ready to learn. The report states, "If progress toward our goal (of school readiness) is to be made, policymakers must have access to data by which progress may be measured". In 2001, The Maryland State Board of Education incorporated a school readiness goal in MSDE's strategic plan, using the annual school readiness information to measure the progress toward this goal. The annual school readiness report has been issued since school year 2001-02.

### **Alignment of School Readiness Measures with the Maryland Content Standards**

The Maryland Content Standards and Maryland State Curriculum (SC) are included in the Maryland Model for School Readiness (MMSR) Framework and Standards defining early learning standards and indicators of what children should know and are able to do before they start formal education. The MMSR includes as its assessment component a customized Work Sampling System<sup>®</sup> (WSS) which is a portfolio-based assessment system that helps teachers document and evaluate children's skills, knowledge, behavior, and academic accomplishments across a variety of curricular areas. Through ongoing observation, recording, and evaluating everyday classroom experiences and activities, teachers gain a better understanding of what their students know, are able to do, and what support is still needed. The WSS<sup>®</sup> domains which are part of the school readiness information are:

1. Social and Personal Development;
2. Language and Literacy;
3. Mathematical Thinking;
4. Scientific Thinking;
5. Social Studies;
6. The Arts;
7. Physical Development and Health.

## School Readiness Information Reported

Kindergarten teachers use the WSS<sup>®</sup> with all children throughout the school year<sup>1</sup>. For this report, teachers have provided information on students' skills for the first grading period in the fall 2011. The fall assessment ratings were done on 30 selected WSS<sup>®</sup> performance indicators of the 66 WSS<sup>®</sup> Kindergarten Checklist indicators, reflecting skills and abilities that can reasonably be expected from children when they enter kindergarten. The 30 WSS<sup>®</sup> indicators represent the aforementioned seven WSS<sup>®</sup> domains (Appendix A) that were used for the school readiness baseline information.

More than 2,000 kindergarten teachers used portfolio-based assessment to document their students' performance in their classrooms during the first eight weeks of school. Between November 1-16, 2011, the teachers evaluated and rated their students' performance according to the WSS<sup>®</sup> assessment protocol and specific assessment guidelines, Exemplars, which were developed by MSDE.

The assessment information in this report reflects scores for each of the seven (7) domains and the composite score of all domains. The information has also been analyzed for each of the seven (7) domains and the composite score by the following demographic information:

- race/ethnicity<sup>2</sup>;
- gender;
- prior early care;<sup>3</sup>
- special education;<sup>4</sup>
- English Language Learners (ELL);<sup>5</sup> and,
- enrollment in free and reduced priced meals program.<sup>6</sup>

Reporting of the scores reflects the percentage of students who have reached one of the following levels of readiness:<sup>7</sup>

**Full Readiness:** Students consistently demonstrate skills, behaviors, and abilities, which are needed to meet kindergarten expectations successfully.

**Approaching Readiness:** Students inconsistently demonstrate skills, behaviors, and abilities which are needed to meet kindergarten expectations successfully and require targeted instructional support in specific domains or specific performance indicators.

**Developing Readiness:** Students do not demonstrate skills, behaviors, and abilities, which are needed to meet kindergarten expectations successfully and require considerable instructional support in several domains or many performance indicators.

---

<sup>1</sup> Many local school systems have the WSS indicators integrated into their kindergarten report cards.

<sup>2</sup> This information reflects the new ethnicity/race codes required as of the 2010-2011 school year: Hispanic/Latino, American Indian or Alaska Native, Asian, Black or African American, native Hawaiian or Other Pacific Islander, White.

<sup>3</sup> This information describes the percentage of students who had their most recent (i.e., 12 months), predominant, and structured early care experience in the following types of programs: child care center; family child care, Head Start, nursery school, public school prekindergarten, or had their prior experience at home or in some type of informal care with a relative.

<sup>4</sup> This information describes the percentage of students assessed who receive special education services and have an Individual Education Plan (IEP).

<sup>5</sup> This information describes the percentage of students who have a primary or home language other than English and limited or no age-appropriate ability to understand, speak, read, or write English.

<sup>6</sup> This information describes the percentage of students whose application meets the family size and income guidelines of the U.S. Department of Agriculture School Lunch Program for the categories "free" and "reduced" price meals.

<sup>7</sup> See [Introduction to Scoring](#) on p. B-1

School readiness data is reported for:

- State of Maryland
- Local School Systems
- Maryland School for the Deaf

Each local school system receives the kindergarten assessment information on individual students, individual schools, and school system reports in the form of the aforementioned aggregated and disaggregated information. In addition, local school systems receive assessment information on each of the 30 WSS<sup>®</sup> indicators of learning.

### **Interpreting Results**

Interpreting the results regarding the readiness levels for specific groups should be evaluated as a way to track progress over time for each domain and each demographic category. For instance, the trend for the domain, *Language and Literacy*, should be tracked over time by comparing the results from year to year. Any progress is measured at the 95 percent confidence interval. The same measure applies, for example, in determining any significant changes over time for *Language and Literacy* using specific prior care categories, such as prekindergarten or child care center. Caution must be taken when interpreting the information when relatively small numbers of children are involved. The information presented in this report does not presume any specific causes for the annual changes in the data.

### **Use of Data and Accountability**

The data provides a snapshot of school readiness levels of entering kindergartners for the state and for each local school system in the fall of each year. The school readiness information is designed for purposes of instructional accountability, i.e., the data should inform practitioners and policymakers of how to improve the learning opportunities for young children and to begin the discourse for improving the quality of early childhood education. In general, the information can be used to:

- Develop a county-wide needs assessment regarding the skill levels of children entering kindergarten.
- Target federal, state, and local funds to address identified needs in the county.
- Develop forums for partnership building.
- Modify curricular and intervention programs and to identify resources for kindergarten.

### **Validity and Reliability of Data**

Since Maryland's kindergarten teachers are using a portfolio-based assessment to evaluate their students' skill levels, any concerns about the subjectivity of the teachers' evaluations must be addressed. The school readiness information is based on formative and summative evaluation protocols. The summative evaluations in the fall include the students' observed and documented records of their skills, behavior, and knowledge in response to the introduction of the kindergarten curriculum. The teachers are trained in the use of specific guidelines<sup>8</sup> which define fall benchmarks of kindergarten expectations for each of the 30 WSS<sup>®</sup> indicators of learning. The indicators for the WSS<sup>®</sup> domains *Language and Literacy*, *Mathematical and Scientific Thinking*, *Social Studies*, the *Arts*, and *Physical Development* are aligned with the Maryland Content Standards, the State Curriculum, and the MMSR Framework and Standards. Any sampling error of the results is eliminated by implementing census administration of the WSS<sup>®</sup>. Each local school system oversees the administration of the kindergarten assessment and, in addition, the data is analyzed and verified through a reliability analyses. An abridged version is included in this report under Appendix F.

---

<sup>8</sup> The specific guidelines, MMSR Fall Exemplars, describe examples of student behaviors in terms of rubrics established for the WSS<sup>®</sup> rating scale.

## ***State Strategies to Improve School Readiness***

In December 2006, one year after the transfer of child care to MSDE, the newly established Division of Early Childhood Development received approval from the Maryland State Board of Education for a three-year strategic plan to improve the school readiness skills of young children. The plan outlines the major strategies which promise the biggest gains in achieving school readiness as it is defined in Maryland:

- Quality of teaching personnel
- Quality of early care and education programs, including learning environment, curriculum, and early intervention services
- Increased awareness and involvement of families in the early education of their children
- MSDE, in coordination with local school systems and early childhood partners, is addressing these strategies by means of policy, funding, and developing public-private partnerships.

### **Quality of Teaching Personnel**

Maryland established the Child Care Credentialing Program, a workforce development strategy to improve the qualifications of child care teachers. There are currently 7051 child care teachers or 22 percent of the workforce enrolled in the credentialing program, and it is steadily growing. Part of the program is the scholarship fund as an incentive for child care teachers to receive credentials from a post-secondary institution. Starting in the fall of 2008, 126 teachers were eligible to receive the scholarships.

MSDE provides state and Federal funds to offer continuing education for more than 4,000 child care, Head Start, prekindergarten, kindergarten teachers annually.

The Task Force on Universal Preschool Education proposed recommendations to increase the number of state certified teachers in early childhood education in order to expand the pool of teachers working in prekindergarten classrooms.

### **Quality of Early Care and Education Programs, Including Professional, Curriculum, and Early Intervention Services**

The implementation of full-day kindergarten and the expansion of prekindergarten have improved the access to high quality early learning programs at public schools.

The Judy Center partnerships at Title I Schools, a collaborative model among elementary schools, family support centers, preschool special education, Head Start, and child care programs, have created models of excellence and community hubs in early education across the state. Designed by the late Judy Hoyer, there are now 25 centers reaching out to more than 39 elementary schools. In addition, Maryland established the Early Childhood Accreditation Project and increased the number of accredited programs since 2001. Currently more than 900 early childhood programs are accredited nationally or by the state.

Since 2007, when MSDE established a preschool curriculum project, curricular resources have been disseminated to more than 400 child care centers and nursery schools.

All child care programs across the state now have access to early intervention services through the Early Childhood Mental Health program. The services are coordinated with the regional child care resource and referral centers. MSDE promotes the expansion of quality child care for infants and toddlers and has worked on comprehensive plans to expand early intervention services for normally developing children and those with disabilities.

### **Increased Awareness and Involvement of Families in the Early Education of Their Children**

MSDE, aside from developing materials for parents and programs, has worked closely with the Ready at Five and Maryland Family Network's outreach to families. The materials disseminated to families reinforce the state's school readiness focus, its goals, and evidence-based practices in parental engagement.

MSDE believes that the accessibility and affordability of high quality programs is the greatest impediment to meeting the state's school readiness target.

According to data of the Maryland Model for School Readiness (MMSR) Kindergarten Assessment, last school year 13 percent of four year olds have had no formal group experience in state regulated early childhood programs. There is disproportionately greater representation of minority and immigrant children in this group. While high quality programs are offered, many families either decide not to access them or do not have the financial means to enroll the children in these programs.

Local jurisdictions developed strategies to address school readiness. For instance, Montgomery County collaborated with community partners to offer services that support learning in focused MMSR domains based on the trend data. Queen Anne's County implemented the Social Emotional Foundations of Early Learning (SEFEL) to support the social/personal development of children in their early childhood programs and Somerset County increased its parent involvement and community outreach efforts. Worcester County expanded its MMSR professional development to include child care providers.

For more information about local readiness initiatives, Ready at Five, in partnership with the Maryland State Department of Education, publishes *Getting Ready* which is available at [www.readyatfive.org](http://www.readyatfive.org).

# **APPENDIX A**

## **Maryland Model for School Readiness Kindergarten Assessment: Work Sampling System<sup>®</sup> (WSS) Indicators of Learning**

## ***Maryland Model for School Readiness Kindergarten Assessment: Work Sampling System<sup>®</sup> (WSS) Indicators of Learning***

**Introduction:** The Maryland Model for School Readiness (MMSR) uses a customized Work Sampling System<sup>®</sup> (WSS) Kindergarten Checklist to assess entering kindergartners' readiness levels. A selected set of 30 WSS<sup>®</sup> indicators across seven curricular domains describe skills, behaviors, and knowledge of children who are entering kindergarten. The 30 WSS<sup>®</sup> indicators below are briefly described. Teachers systematically observe their students, document their learning, and rate their competencies using specific WSS<sup>®</sup> Kindergarten Assessment Guidelines, Exemplars, which were developed by MSDE. The Exemplars are based on the MMSR standards, indicators, and learning objectives. They describe documented student skills and behaviors at the objective level, linking curricular and learning objectives to MMSR indicators.

### **I Social and Personal**

<b>SELF-CONCEPT</b>	
<b>Shows initiative and self-direction.</b>	Independence in thinking and action enables children to take responsibility for themselves. Most five year olds can make choices among familiar activities, participate in new experiences, and are willing to take some risks.
<b>SELF-CONTROL</b>	
<b>Follows classroom rules and routines.</b>	Children who are successful within a group know and accept the rules established for that particular group.
<b>Uses classroom materials purposefully and respectfully.</b>	One of the major challenges of school for five year olds is learning how to care for classroom materials. With some reminders, a child learns how to use materials thoughtfully (so the materials continue to be available for others) and how to put things away so that others can easily find them.
<b>INTERACTION WITH OTHERS</b>	
<b>Interacts easily with one or more children.</b>	Kindergarten children are beginning to play cooperatively with one or more children, listen to peers and understand their feelings, and solve problems cooperatively.

## II Language and Literacy

LISTENING	
<b>Gains meaning by listening.</b>	Young children are actively involved in learning about their world by watching and listening. At five years, children can listen for meaning in such different situations as one-on-one conversations with children or adults, small and large group activities, story times, and videos.
<b>Demonstrates beginning phonemic awareness.</b>	With frequent demonstrations by the teacher, children recognize and produce rhyming words, identify beginning and ending sounds, and begin to discriminate the smaller parts of words, first distinguishing syllables and, later, sound within syllables.
SPEAKING	
<b>Speaks clearly and conveys ideas effectively.</b>	During kindergarten, children begin to understand how to express their ideas in group discussions as well as in one-to-one conversations.
READING	
<b>Shows some understanding of concepts about print.</b>	Kindergartners realize that print conveys meaning, spoken language can be written down and read, and certain words are always written the same way.
<b>Comprehends and responds to fiction and non-fiction text.</b>	Kindergartners demonstrate their understanding of what they hear by answering questions about the text, predicting what will happen next using pictures and content for guides, and retelling information from a story in sequence, adding more details and story elements over time.
WRITING	
<b>Uses letter-like shapes, symbols, letters, and words to convey meaning.</b>	Children begin using drawings to convey ideas, adding letters or words randomly to their written communication.

### III Mathematical Thinking

MATHEMATICAL PROCESSES	
<b>Begins to use and explain strategies to solve mathematical problems.</b>	Young children solve problems and explain their reasoning by working with concrete objects, drawing pictures, or acting out solutions.
NUMBERS AND OPERATIONS	
<b>Shows understanding of number and quantity.</b>	Kindergarten children can count objects to at least 20; many learn to count verbally (that is, by rote) to 100. They can count using one-to-one correspondence reliably, use objects to represent numbers, and use numerals to represent quantities.
PATTERNS, RELATIONSHIPS, AND FUNCTIONS	
<b>Recognizes duplicates and extends patterns.</b>	Kindergartners can recognize, create, copy, and extend simple patterns using concrete objects, sounds and physical movements.
GEOMETRY AND SPATIAL RELATIONS	
<b>Recognizes and describes some attributes of shapes.</b>	As children play with unit blocks, table blocks, pattern blocks, shape sorters, peg boards, and geoboards, they gain a concrete understanding of shape and form.

### IV Scientific Thinking

INQUIRY	
<b>Seeks information through observation, exploration, and descriptive investigations.</b>	As questions are raised, kindergartners seek answers primarily through exploration, manipulation, and careful observation using their senses.
<b>Uses simple tools and equipment to extend the senses and gather data.</b>	Although kindergartners begin to observe using their five senses, they are very intrigued with tools that extend the power of their senses and that they associate with grown-up activities. Scientific tools include magnifiers, gears and pulleys, calculators and computers, and simple balance scales and rulers.
PHYSICAL SCIENCE	

<b>Identifies, describes, and compares properties of objects.</b>	With prompts from the teacher, five year olds notice what things are made of and describe numerous attributes of objects including size, shape, color, texture, weight, temperature, whether objects are attracted or unaffected by magnets, and whether various objects sink or float.
<b>LIFE SCIENCE</b>	
<b>Observes and describes characteristics, basic needs, and life cycles of living things.</b>	Kindergartners begin to differentiate living and non-living things by studying plants and animals. They begin to learn about relationships between animals and plants and the environment in which they live.

**V Social Studies**

<b>PEOPLE, PAST AND PRESENT</b>	
<b>Identifies similarities and differences in people’s characteristics, habits, and living patterns.</b>	Kindergartners develop self-identity by comparing themselves with others.
<b>HUMAN INTERDEPENDENCE</b>	
<b>Describes some people’s jobs and what is required to perform them.</b>	Young children are ready to examine their communities and explore the many roles people fill in helping each other live.
<b>Begins to be aware of technology and how it affects life.</b>	Kindergartners are very interested in the technology that is so much a part of the world around them (television, telephones, vehicles, video games, VCRs, microwave ovens, computers).
<b>CITIZENSHIP AND GOVERNMENT</b>	
<b>Demonstrates awareness of the reasons for rules.</b>	Children’s understanding of the reasons for rules and laws comes about as they discuss problems in the classroom and school and participate in making reasonable rules that directly involve them.

## VI The Arts

EXPRESSION AND REPRESENTATION	
<b>Participates in group music experience.</b>	Young children enjoy singing, making up silly and rhyming verses, using instruments, learning finger plays, and using music to tell stories and express feelings.
<b>Participates in creative movement, dance, and drama.</b>	Young children are very active and need opportunities to move and stretch their bodies.
<b>Uses a variety of art materials to explore and express ideas and emotions.</b>	Kindergartners need and enjoy opportunities to explore using a variety of art materials.
UNDERSTANDING AND APPRECIATION	
<b>Respond to artistic creations or events</b>	Kindergartners are able to appreciate the artistic creations of others, the skill of a dancer, or someone's ability to play a musical instrument.

## VII Physical Development and Health

GROSS MOTOR DEVELOPMENT	
<b>Moves with balance and control.</b>	Young children are very active, seeming to be in constant motion. Kindergarten children can run smoothly, hop many times on each foot, and climb up and down stairs using alternating feet.
FINE MOTOR DEVELOPMENT	
<b>Uses eye-hand coordination to perform tasks effectively.</b>	Kindergartners are continuing to improve their eye-hand coordination and accomplishing tasks with greater precision.
PERSONAL HEALTH AND SAFETY	
<b>Performs self-care tasks competently.</b>	Kindergartners are quite competent about taking care of their own physical needs and often volunteer to help classmates who are struggling with buttons and laces.
<b>Shows beginning understanding of and follows health and safety rules.</b>	Kindergartners are interested in health and safety issues, especially when these relate to their own experiences.

Based upon the Work Sampling System® by Pearson Assessments. All adaptations to Work Sampling System® by the State of Maryland are the property of Pearson Assessments.

# **APPENDIX B**

## **Introduction to Scoring**

## **Presentation of School Readiness Information**

## **Definitions**

## **School Readiness Information for:**

- ❖ **Maryland**
- ❖ **24 Local School Systems**
- ❖ **Maryland School for the Deaf**

## Introduction to Scoring

The scoring of the 30 selected Work Sampling System® (WSS) indicators for the MMSR Kindergarten Assessment representing seven curricular domains, was done by classroom teachers assigning one of three ratings, *Proficient*, *In Process* or *Needs Development*, in each of four indicators within six domains and six indicators within the domain, Language and Literacy. Thus, a student is being evaluated for 30 specific skills and behaviors that are aggregated into the domains of *Social and Personal*, *Language and Literacy*, *Mathematical Thinking*, *Scientific Thinking*, *Social Studies*, *The Arts*, and *Physical Development*. In addition, a composite score, representing all seven domains, was created. In the aggregated format, the scores reflect school readiness levels. The following specific steps were taken to create scoring scales for each domain and the composite.<sup>1</sup>

1. Each of the scores at the indicator level was given the following values.
  - Proficient = 3
  - In Process = 2
  - Needs Development = 1
2. The sum is calculated for the four indicator values from six of the domains and the six indicator values from Language and Literacy.
3. The sums were then divided into three readiness levels.

**For Language and Literacy:**

  - Full Readiness = sums of 18, 17, 16 & 15
  - Approaching Readiness = 14, 13, 12, 11 & 10
  - Developing Readiness = 9, 8, 7 & 6

**For the Domains with 4 Indicators**

  - Full Readiness = sums of 12, 11 & 10
  - Approaching Readiness = sums of 9, 8 & 7
  - Developing Readiness = 6, 5 & 4
4. The following definitions were developed for the readiness levels.
  - **Full Readiness:** Students consistently demonstrate skills, behaviors, and abilities needed to meet kindergarten expectations successfully.
  - **Approaching Readiness:** Students inconsistently demonstrate skills, behaviors, and abilities needed to meet kindergarten expectations successfully and require targeted instructional support in specific domains or specific performance indicators.
  - **Developing Readiness:** Students do not demonstrate skills, behaviors, and abilities needed to meet kindergarten expectations successfully and require considerable instructional support in several domains or many performance indicators.

---

<sup>1</sup> MMSR Kindergarten Assessment Data Entry and Management Manual

5. A similar process allows for all indicator values to be summed across domains and then placed in the same three proficiency levels with the following values.
  - Full Readiness = sums of 71 through 90
  - Approaching Readiness = sums of 50 through 70
  - Developing Readiness = sums of 30 through 49

It is with the categories of Full, Approaching and Developing Readiness within domains and at the composite level that all data are reported.

## Presentation of School Readiness Information

There is a three-page report on the school readiness information for the state of Maryland.

The first chart provides the percentage of students across the three readiness levels for each of the seven domains and the composite of the domains for the baseline year, prior year, and the current year's data. The bar graphs describe the percentages of entering kindergarten students whose scores fall into any of the three readiness levels (i.e., full, approaching, developing readiness levels).

The second page with the table provides the disaggregation of the same information for each of the seven domains and the composite of the domains by the following demographic variables:

- Race/ethnicity
- Gender
- Prior care
- Students with disabilities in special education
- Students who are English language learners
- Students enrolled in the free and reduced priced meals program

This table breaks out the information from the aforementioned first chart into percentages of students for each of the readiness levels by domain and the composite of domains.

The third chart lists the number of kindergarten students in each category. Note that the number of students (i.e., cases used to compute the percentages) differs among the domains and the composite. The difference is explained as errors in completing the assessment information (e.g., incorrect markings on the scanned forms, damaged forms, or missed items on the scanned forms or electronic checklist).

Local school systems receive school readiness information for their system and for each of their elementary schools.

## Definitions

- **Composite Score.** The ratings for the seven domains are combined to provide an overall measure of school readiness.
- **Prior Care.** The categories of early care and education are considered as they impact on school readiness. Prior care reflects kindergarten students' enrollment within 12 months prior to starting kindergarten. The prior care types are as follows:
  1. **Head Start.** A federal pre-school program for 2 to 5 year olds from low-income families; funded by the US Department of Health and Human Services and licensed by the Maryland State Department of Education (MSDE)/Collaboration and Program Development Branch, and/or local boards of education.
  2. **Prekindergarten.** Public school prekindergarten education for four-year old children. Administered by local boards of education and regulated by the Maryland State Department of Education (MSDE).
  3. **Child Care Center.** Child care provided in a facility, usually non-residential, for part or all of the day that provides care to children in the absence of the parent. The centers are licensed by the Maryland State Department of Education (MSDE)/Office of Child Care
  4. **Family Child Care.** Regulated care given to a child younger than 13-years old, in place of parental care for less than 24 hours a day, in a residence other than the child's residence and for which the provider is paid. Family child care is regulated by the Maryland State Department of Education (MSDE)/Office of Child Care
  5. **Non-Public Nursery School.** Pre-school programs with an "education" focus for 3 and 4-year olds; approved or exempted by MSDE; usually part-day, nine months a year.
  6. **Home/Informal Care.** Care by parent(s) or a relative.
- **Students Receiving Special Services.** The following categories of special services are reported for the Kindergarten students.
  - **English Language Learners (ELL).** Students who are not born in the United States (US) or whose native language is a language other than English or no age appropriate ability to understand, speak, read, or write English.
  - **Special Education.** Students with disabilities who receive special education services and have a current Individualized Education Plan (IEP).
  - **Free or Reduced Priced Meals.** Students whose applications meet family size and income guidelines for receiving free or reduced priced meals based on the United States Department of Agriculture (USDA) guidelines.

## **Frequently Asked Questions**

## **Frequently Asked Questions**

### **1. Why is the school readiness information collected and reported annually?**

The Maryland General Assembly is interested in improving services for young children to prepare them to enter school ready to learn. Several legislative committees want to know what children know and are able to do when they enter school. This has necessitated school readiness data at the entry into kindergarten. Collecting evaluation information on all entering kindergarten students enables policymakers and other stakeholders to have access to data by which progress can be measured over time. The Maryland State Department of Education (MSDE) is the state agency charged with implementing an assessment system for kindergarten. It is required to report this information to the General Assembly in March of each year.

### **2. How is the information collected?**

All kindergarten teachers use the Maryland Model for School Readiness (MMSR) Kindergarten Assessment, a portfolio-based assessment to document their students' performance in their classrooms during the first eight weeks of school. In the fall of every year, the teachers evaluate and rate their students' performance on 30 selected indicators of the MMSR Kindergarten Assessment's customized Work Sampling System<sup>®</sup> (WSS) Kindergarten Checklist using Exemplars which are specific assessment guidelines that were developed by MSDE. This information is aggregated and disaggregated, i.e., broken out, into the data displayed in this report.

### **3. What is the advantage of using performance-based assessment rather than a norm-referenced test to measure school readiness?**

Performance-based assessments measure demonstrated skills, knowledge, and behaviors in an actual learning setting such as a kindergarten classroom. When measuring readiness for school, all developmental skill areas are important. Qualified kindergarten teachers, properly trained and prepared, are an excellent source of information for their students. They assess children's skills against established standards of learning<sup>1</sup>. On the other hand, norm-referenced readiness tests compare a group of children against a national norm. At the kindergarten level, national norms are difficult to obtain and typically do not reflect all developmental skill levels.

### **4. Why are entering kindergartners assessed over several weeks and not during the first week in school?**

In order to learn more about the skills and dispositions of entering kindergartners, the assessment protocol for the data in this report takes into account the following:

- Young children need a familiar and comfortable setting to show what they know and are able to do.
- Teachers are looking for multiple sources of documentation of children's learning which are collected over a period of time.

---

<sup>1</sup> Maryland State Content Standards ,Maryland State Curriculum for Kindergarten, and the [MMSR Framework and Standards](#)

- The MMSR Kindergarten Assessment requires teachers to assess their students' performance in response to the instructional program during the first few weeks of school.

## **5. What does the school readiness information mean?**

The information describes the skills, knowledge, and behaviors of children as they enter public school kindergarten programs. The assessment is based on performance indicators that define valid skills and competencies for that age group of children based on research and national standards of learning. The school readiness baseline information is broken into three categories of "full", "approaching", and "developing readiness". (See Questions 6 to 8)

This information is designed to provide a profile on the readiness levels of a group of children for families, policymakers, schools, early care and education service providers (e.g., child care, Head Start, prekindergarten, etc.), community-based organizations, and the public at large. This information, in combination with other valuable data, will better inform those who are planning to improve the learning opportunities and services for young children.

## **6. What does "full readiness" mean? Does it mean perfect scores?**

Full readiness means that students consistently demonstrate skills, behaviors, and abilities which are needed to meet kindergarten expectations successfully.

A student need not score "proficient" in all indicators within a domain or the composite to be rated at "full readiness". The top range of scores is considered "full readiness". (See *Introduction to Scoring* in Appendix B.)

## **7. What does "approaching readiness," mean?**

Approaching readiness means that students inconsistently demonstrate skills, behaviors, and abilities which are needed to meet kindergarten expectations successfully and require targeted instructional support in specific domains or specific performance indicators. The middle range of scores is considered "approaching readiness." (See *Introduction to Scoring* in Appendix B.)

## **8. What does "developing readiness," mean?**

Developing readiness means that students do not demonstrate skills, behaviors, and abilities which are needed to meet kindergarten expectations successfully and require considerable instructional support in several domains or many performance indicators. The bottom range of scores is considered "developing readiness."

Note: Teachers either rate students "Proficient," "In Process," or "Needs Development." The categories specified above refer to the aggregated score for each domain and composite.

**9. Is the information used to place children in special programs?**

No. The kindergarten teacher uses the information on children for instructional planning in the classroom. Policymakers, program supervisors, and administrators can use the information from this report for program planning purposes.

**10. Is the information used to rate kindergarten teachers' performance?**

No. This is used for program and instructional planning. Kindergarten teachers provide information about children as they enter kindergarten. The assessment information is not a reflection on their performance.

**11. How are teachers using the information?**

Based on teacher responses statewide in school year 2002 – 2003, the assessment information is used as follows (percentage in parenthesis):

- Helps teachers know what they need to do with certain children (92%)
- Helps them determine how to group children (78%)
- Used for reporting purposes to families (86%)
- Used when referring student to inter-disciplinary teams for further evaluation (68%)
- Helpful when completing the local kindergarten report card (80%)

Results reflect multiple teacher responses.

**12. How are school officials using the information?**

School officials, including building administrators and school improvement teams, are able to look at a profile of readiness levels in a school's kindergarten program. This review of the data could impact program development, materials expenditures, and staff training.

**13. How are county officials using the information?**

As county officials consider the early education opportunities within the county and the funding necessary to provide a strong kindergarten program, this data will identify needs upon which decision can be made. Service providers (e.g., child care, prekindergarten, or Head Start programs) that work with young children before they come to kindergarten can review the data to align their programs with kindergarten.

**14. How are state officials using the information?**

State officials use this data to make informed decisions about the result area, *Children Entering School Ready to Learn*, for state policy and budget projections. Also, state officials use the data to facilitate the planning process at the local levels.

**15. How are families using the information?**

Kindergarten teachers share the assessment information with families in the fall as part of regularly scheduled family-teacher conferences. Sharing this information provides a profile of each child's needs and strengths and serves as communication to support children's learning both in school and at home.

**16. How are changes from one year to the next explained?**

Each year a different group of kindergarten students is being evaluated. This year's group of kindergarten students, or their respective subgroups, might look slightly different from groups from previous years. For instance, the degree to which a relatively small group of English language learners is proficient in English might vary from year to year and impact the results. When using the data, it is always helpful to check the actual number of students for each category in addition to the percentage breakout to check major increases or decreases in the data. As a rule, any changes are statistically more volatile when small number of students is involved. Since change is defined statistically as any difference within the 95 percent confidence level, any significant change with relatively small number of children could be relatively large. The changes could also be explained as a result of programmatic or instructional improvements which account for differences. Some of these improvements are more likely to show up in the results of specific domains of learning. For instance, specific instructional approaches in early literacy will most likely impact the domain of *Language and Literacy*. At any rate, when explaining changes in the data, always consult additional assessment data, if available, or seek information from teachers who have worked with the students.

**17. What safeguards have been put in place to make sure that the teacher ratings are reliable and valid?**

The following features have been developed to ensure that the teacher information reflects a consistent application of the assessment protocol:

- MSDE has developed a professional development program for all kindergarten teachers using expert consultants who have been trained and properly oriented. The program uses consistent training materials and evaluation forms to determine the effect of each professional development session. As a result of these efforts, teachers are improving their skills of observation, systematic documentation, and evaluation of students' learning.
- During the professional development program, teachers' accuracy in rating students' skills and abilities is assessed.
- MSDE has produced Exemplars which are specified assessment guidelines for rating students' performances.
- During the professional development program, teachers' accuracy in rating students' skills and abilities is assessed.
- After the student assessment information is submitted to MSDE, the data is reviewed and examined for internal consistency, correlations, and possible irregularities or unusual performances.

Abridged Reliability Analysis

2011-2012

Maryland Model for School Readiness  
Fall 2011 Kindergarten Assessment Data

**Abridged Reliability Analysis: Correlated Relationships Between the Seven Domains and Composite Score and the Consistency of the Work Sampling System Indicators**

*Prepared by: Alicia Singleton, Research Analyst  
Maryland State Department of Education, Division of Early Childhood Development  
Office of the Assistant State Superintendent*

**Introduction:**

The purpose of this document is to discuss the outcomes of two analyses performed on the Maryland Model for School Readiness (MMSR) Kindergarten Assessment. These analyses provide information regarding the subject matter of the assessment (the seven domains) and the individual components of each subject that are evaluated (the 30 indicators). The contents of this report represent a portion of a larger analytical document that investigates other areas of the MMSR assessment.

- **Correlation Analysis of the Composite Scores with the Seven Domains**

The correlation coefficient represents the linear relationship between each domain and the composite score. Using the Sum of Squares Method, the coefficient is calculated to determine which domains have a high correlation to the composite score. A high correlation coefficient indicates a significantly high relationship between the domain score and the composite score. The coefficient of determination represents the proportion of common variation (or strength) of the two variables. The composite score acts as the ‘Y’ variable and each domain is the X<sub>i</sub>th variable. The following table shows the resulting correlation coefficients ( r ) and coefficients of determination ( r<sup>2</sup> ) for each X<sub>i</sub>Y:

**N = 63,951**

<b><u>Domain</u></b>		<b><u>Correlation Coefficient ( r )</u></b>	<b><u>Coefficient of Determination ( r<sup>2</sup> )</u></b>
Personal & Social	X <sub>1</sub>	0.790	0.624
Language & Literacy	X <sub>2</sub>	0.913	0.834
Mathematical Thinking	X <sub>3</sub>	0.884	0.781
Scientific Thinking	X <sub>4</sub>	0.883	0.780
Social Studies	X <sub>5</sub>	0.896	0.803
The Arts	X <sub>6</sub>	0.766	0.587
Physical Development	X <sub>7</sub>	0.756	0.571

As expected, the domains requiring more cognition have a higher correlation to the composite score as well as a higher coefficient of determination. Language and Literacy continues to reign as the most correlated domain to the composite score with a coefficient of 0.913, followed by Social Studies with a coefficient of 0.896, Mathematical Thinking (0.884) and Scientific Thinking (0.883). It is concluded that students who perform better in these domains tend to have a higher composite score. For the 2011-2012 assessment, the average domain increase of students being fully ready was 2%. The greatest increases were in Social Studies and Scientific Thinking, thus supporting the State percentage increase of students being fully ready.

- **Measurement of the Inner Consistency of the Work Sampling System Indicators – Chronbach’s Alpha ( $\alpha$ )**

Establishing that performance in specific domains directly affect the composite score, we now take a look at the components of the domains, the 30 indicators. Chronbach’s Alpha is an estimate of the reliability of interrelated items that are summed to obtain an overall score. It determines the internal consistency of the test or the correlation of each test item within the test. Generally, the alpha increases when the correlation between the test items increases. The calculated alpha ( $\alpha$ ) for the 30 indicators and 63,951 (N) observations is 0.969. For each indicator, we look to see if the correlation will either decrease or increase if that item is deleted from the scale. A decrease in the correlation indicates that the indicator is highly correlated with the other indicators on the scale. A low correlation to the other items on the scale is indicated with an increase in the correlation value after the indicator is deleted. The raw correlation value is based on the interrelationship of each item while the standard correlation value is based on the item covariance, or the distribution of that variable. A high correlation value yields a high covariance value.

The indicators with the highest correlations were in the domains of Language and Literacy (IIC4), Scientific Thinking (IVA1, IVB1, IVC1), and Social Studies (VA1, VB2), which were subsequently domains that were highly correlated to the composite score. The Science indicator, IVB1, “identifies, describes, and compares properties of objects”, had the highest correlation of 0.793. It can be concluded that students who perform well on these indicators are most likely to be rated approaching or fully ready. The lower correlated indicators occurred in the domains of The Arts and Physical Development. Using Chronbach’s Alpha, a 95% Confidence Interval for fully ready students for the Fall 2011 assessment is found to be  $83 \pm 4.004$ , **yielding the true percentage of fully ready kindergarten students to be between 78.996% and 87.004%**. The following table illustrates the correlation values for each of the 30 indicators.

**Correlation Table of the Work Sampling System Indicators**

Indicator	Raw Correlation if Item Deleted	Raw Alpha if Deleted	Standard Correlation if Item Deleted	Standard Alpha if Deleted
